

< ACTIVE FOAM >

Active acidified, strong foaming agent for use in carwashes

Product description

ACTIVE FOAM is an acid active foam for use in automatic carwashes.

Properties

ACTIVE FOAM has been developed to create an acidified foam in carwashes or foaming arches, with or without water recycling.

ACTIVE FOAM improves the drying result by neutralising the alkaline prewash.

ACTIVE FOAM avoids dirt and greasy parts to stick on the washing material: brushes or textile. Can be used on all types off vehicles without danger for user and material.

ACTIVE FOAM gives an easily rinse-off foam, and leaves no remainders between door cracks and trunks.

Directions for use

Always use ACTIVE FOAM in combination with air-pressure and water to obtain a creamy foam.

Dosage: 10 to 20ml per car, according the desired foam quality.

Rinse off with clear water, afterwards apply polish, wax or drying agent.

Dry the car.

Specifications

| | |
|-----------------|---|
| Appearance: | Fluo pink liquid Strong foaming action |
| pH (1%): | 5.0 |
| Density (20°C): | 1.020 kg/l |
| Freezing point: | -5°C |
